报告题目: **Discovery of an Active Intermediate-mass Black Hole Candidate in the Barred Bugeless Galaxy NGC 3319**

Journal Club Public Talk:

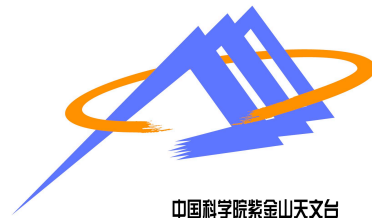

报 告 人: 任 建

报告题目: **New IFU insights on the major merger remnant NGC7252**

报告摘要:

Merger play an important part in galaxy formation and evolution, can help us understand the size growth, mass assembly, star formation, AGN activity and morphology transformation of galaxies. NGC7252 is one of the nearest major-merger galaxy remnants. It is an ideal laboratory to study the gas and stars. In this talk, I will give a brief introduction on galaxy merger and present the latest wide-field Integral Field Unit (IFU) spectroscopy observations of NGC7252.
